**THERMOSTABLE DNA POLYMERASES**

All thermostable DNA Polymerases are also available as Kits, which include a DNA Polymerase and a mix of carefully tested and calibrated ultrapure dNTPs (catalog numbers indicated with letters EK).

**Taq DNA Polymerases**

**Taq DNA Polymerase**

Ultrapure, recombinant Taq DNA polymerase for general use (5.0 u/μl).

## 10. XELEX KITS

Aptamers allow distinct molecules to bind to target structures with high specificity and affinity by non-covalent molecular interactions (with respect to certain features aptamers resemble antibodies). Aptamer selection against a broad range of target structures is possible, including proteins, polysaccharides, various large and small organic molecules (drug compounds) and even small metal ions.
