

1 x TE pH 8.0

Molecular Biology Grade

Cat. No.	Size
E0250-01	500 ml
E0250-02	1 l

Storage Conditions :

Store at +15°C to +30°C

Description:

TE buffer is commonly used buffer solution in molecular biology, especially in procedures involving DNA or RNA.

The purpose of TE buffer is to solubilize DNA or RNA, while protecting it from degradation.

Components:

10 mM Tris-HCl (pH 8.0)

1 mM EDTA

Quality Control:

Each lot is assayed for nuclease activity.

This product is developed, designed and sold exclusively for research purposes and in vitro use only.
